NOTE OF USE

Modulate Captchadd

Version 1.0

Copyright: Librasoft 2014

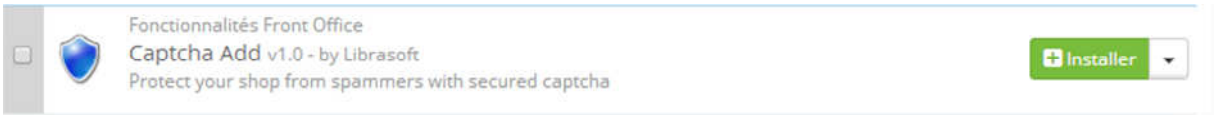
PRE-REQUIS

In order to use this module you should:

- A functional installation of PrestaShop in version 1.4 minimum.

INSTALLATION ON PRESTASHOP

The installation of the module on PrestaShop is very simple.
Add or copy the module in your section modules and click on Installer.

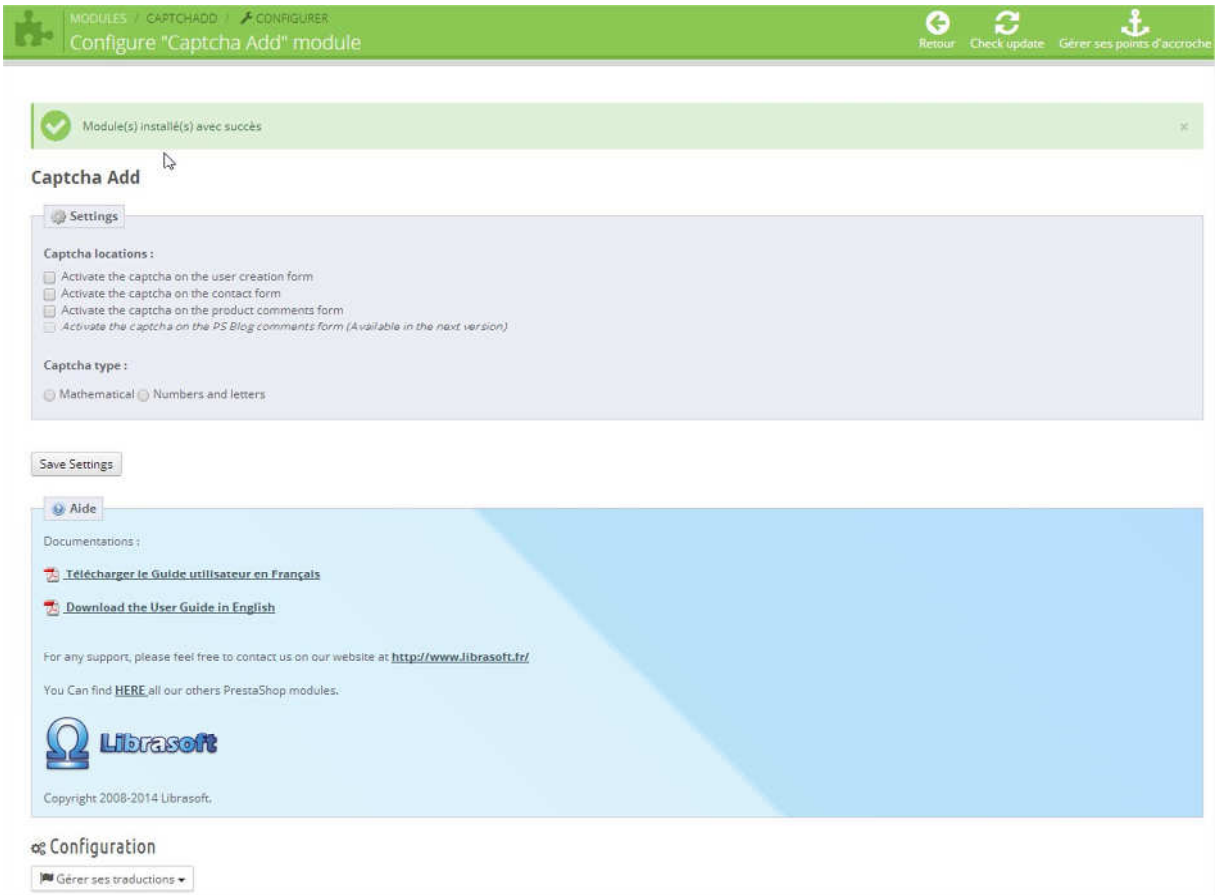


CONFIGURATION OF THE MODULE

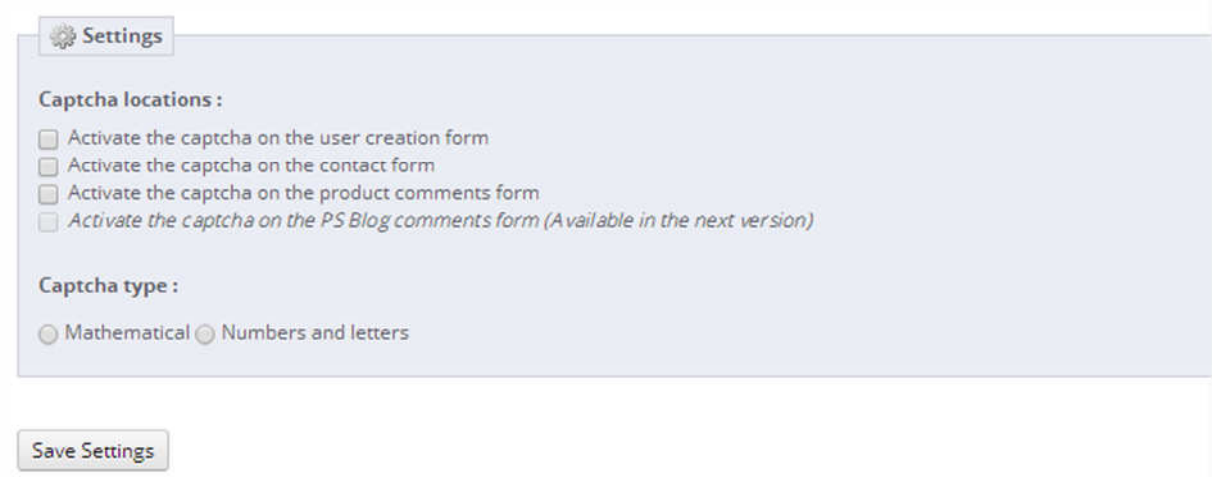
Once installed, click on Configurer. Two blocks are presented to you.

➔ The principal block of adjustments

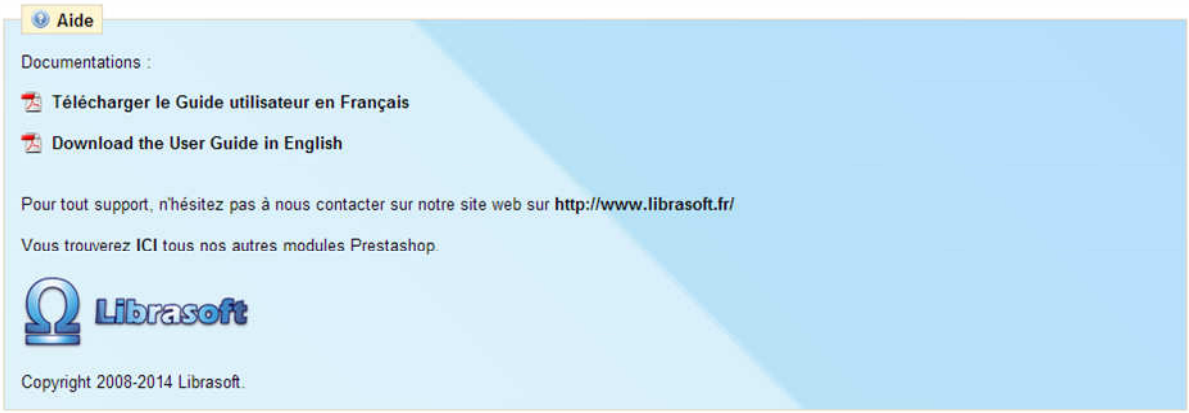
➔ The block of assistance



❖ The principal block of adjustments:



❖ The block helps:

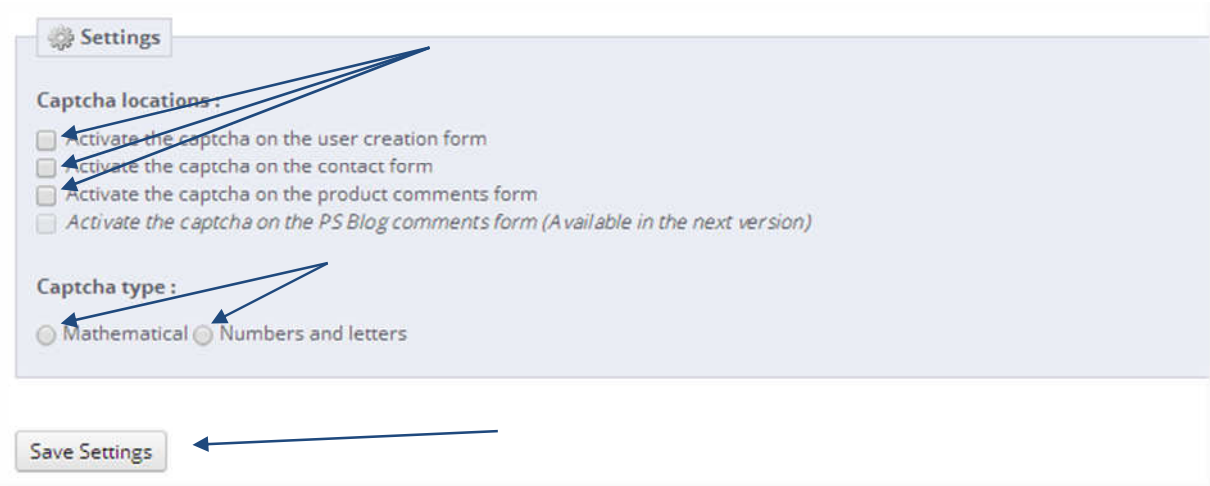


This last block gives access to you this documentation, to consult the other modules of which we are the authors, and to contact us via our Web site if you have questions.

USE OF THE MODULE

The configuration of the module is very simple.

Notch simply the forms on-which you wish to see appearing a captcha.



And select the desired type of captcha.

There are two types, the using captcha of calculations, or the captcha container letters and figures:

Then click on “Recording the parameters”.

OPERATION

Each time a customer wants to use one of the forms on which you added the captcha, this one will have besides the other fields, to solve the captcha to be able to validate its form.

That enables you to protect yourselves from the spammers.

POSSIBLE ERRORS

Although all the precautions were taken during the development of this module, it may be that this one does not settle correctly according to your template.

If your template respects the standards of Prestashop strictly, should not meet concern to you.

In the contrary case, here the most current cases:

The captcha does not appear on my form, and when I click on sending, I have an error message informing me that the captcha is not good:

That wants to say that the patch is present in controlling it, but not on the template.

Several reasons are possible:

- Bad desinstallation, made a manual desinstallation in controlling it
- Bad installation, made a manual installation in the template
- You changed topic meanwhile, strip the form, save the parameters, recochez the form, resauvez the parameters.

The captcha appears well, but no matter what I return, the form is validated nevertheless:

That wants to say that the patch is not present in controlling it, we invite you to install it manually.

The captcha is posted well and functioned well, but the presentation is ugly:

The captcha tries to adapt to all the templates, unfortunately it may be that is not appropriate to you. You can at this time to ask your webdesigner to adapt the posting of the captcha by modifying the following file:

- For Prestashop v1.4: /modules/captchadd/captchadd.tpl
- For Prestashop v1.5 and v1.6: /modules/captchadd/view/templates/hook/captchadd.tpl

Contrary to your captures of screens, I have only two choices of form in the parameters of the module:

If you are in Prestashop v1.4, it is normal because the form of the comments of the products is dealt with only starting from version 1.5 of Prestashop.

I have a form “PS Blog Forme” that I cannot notch, it is grayed:

It is normal, it acts of one of our next functionalities. This one will be available with the next version of the module. The update will be free.
